| <b>Office Action Summary</b> | Application No.          | Applicant(s)     |
|                              | 10/091,781               | PAUL ET AL.      |
|                              | Examiner<br>David Lazaro | Art Unit<br>2155 |

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) Responsive to communication(s) filed on 27 June 2006.  
 2a) This action is FINAL.                    2b) This action is non-final.  
 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) Claim(s) 13, 16 and 25-53 is/are pending in the application.  
 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.  
 5) Claim(s) \_\_\_\_\_ is/are allowed.  
 6) Claim(s) 13, 16 and 25-53 is/are rejected.  
 7) Claim(s) \_\_\_\_\_ is/are objected to.  
 8) Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) The specification is objected to by the Examiner.  
 10) The drawing(s) filed on \_\_\_\_\_ is/are: a) accepted or b) objected to by the Examiner.  
     Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
     Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).  
 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).  
 a) All    b) Some \* c) None of:  
 1. Certified copies of the priority documents have been received.  
 2. Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.  
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**DETAILED ACTION**

1. This office action is in response to the amendment filed 06/27/2006.
2. Claims 13, 16 and 38 were amended.
3. Claims 1-12, 14, 15 and 17-24 are withdrawn.
4. Claims 13, 16 and 25-53 are pending in this office action.

***Response to Amendment***

5. Applicant's arguments filed 06/27/2006 have been fully considered but they are not persuasive. See Response to Arguments. Accordingly, the grounds of rejection as presented in the 12/27/2005 office action, are respectfully maintained.
6. The rejection of claim 38 under 35 U.S.C. §101 is withdrawn.

***Claim Rejections - 35 USC § 102***

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

8. Claims 13, 16, 25, 27, 31-33, 35, 37-39, 41, 44, 46-49, 51 and 53 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Patent 6,944,621 by Collart (Collart).

Art Unit: 2155

9. With respect to Claim 13, Collart teaches a method for repurposing multimedia file, comprising:

including a sequence of data values to override embedded messages that are statically encoded within the multimedia files in a portable storage medium (PSM) (Col. 4 lines 43-53) so that the embedded message may be altered (Col. 4 lines 28-42 and Col. 7 lines 33-59 - Updates for static data on a PSM can be retrieved from a remote source over a network, such as the internet. Updates intercept and replace the requests for static information.);

obtaining a statically embedded request within a multimedia file residing on a PSM (Col. 7 lines 33-59 - dvd selection/user selection would generate an embedded request);

obtaining a sequence of data values to override the embedded request (Col. 7 lines 33-59 - Updates for static data on a PSM can be retrieved from a remote source over a network, such as the internet);

substituting the sequence of data values for the statically embedded request by formatting a new sequence of data values (Col. 7 lines 33-59 - Updates intercept and replace the requests for static information.);

assigning the new sequence of data values through a substitution component (Col. 7 lines 33-59 - Updates intercept and replace the requests for static information. Also note embodiments starting in Col. 9 line 65 - Col. 10 line 8.);

embedding an autonomous media object (AMO) into the substitution component (Col. 7 lines 33-59 - Updates intercept and replace the requests for static information.)

Art Unit: 2155

Also note embodiments starting in Col. 9 line 65 - Col. 10 line 8.), where the AMO and the multimedia file are compounded together to display at the same time (Col. 7 line 60 - Col. 8 line 2);

transmitting the substitution component to a client readable medium where the PSM is located (Col. 7 lines 33-59 - Updates for static data on a PSM can be retrieved from a remote source over a network, such as the internet.).

10. With respect to Claim 25, Collart teaches all the limitations of Claim 13, where the multimedia file is provided through the internet (Col. 5 lines 12-25).

11. With respect to Claim 27, Collart teaches all the limitations of Claim 13, where the sequence of data values to override is a commercial within the multimedia file (Col. 3 lines 47-55 and Col. 9 lines 7-17).

12. With respect to Claim 31, Collart teaches all the limitations of Claim 13, where the sequence of data value is a video file (Col. 9 lines 7-18).

13. With respect to Claim 32, Collart teaches all the limitations of Claim 13, where the sequence of data value is an image file (Col. 9 lines 7-18).

14. With respect to Claim 33, Collart teaches all the limitations of Claim 13, where the sequence of data value is an audio file (Col. 9 lines 7-18).

15. With respect to Claim 35, Collart teaches all the limitations of Claim 13, where the formatting of the new sequence of data values output a HTML component (Col. 5 lines 41-50).

16. With respect to Claim 37, Collart teaches all the limitations of Claim 13, and further teaches if the embedded message is wrong, then substituting the embedded

Art Unit: 2155

message that is wrong and subsequent embedded messages with a correct embedded message (Col. 7 lines 33-59).

17. With respect to Claim 16, Collart teaches a method for securing requests made by multimedia files, comprising:

obtaining a embedded request within a multimedia file (Col. 7 lines 33-59 - dvd selection/user selection would generate an embedded request);

obtaining a sequence of data values to override the embedded request (Col. 7 lines 33-59 - Updates for static data on a PSM can be retrieved from a remote source over a network, such as the internet);

substituting the sequence of data values for the embedded request by formatting a new sequence of data values (Col. 7 lines 33-59 - Updates intercept and replace the requests for static information.);

encoding the new sequence of data values using an algorithm to produce a new series of requests (Col. 7 lines 33-59 and lines 60-65 - updated menu would provide a different series of requests);

assigning the encoded requests through a substitution component (Col. 7 lines 33-59 - update information. Also note embodiments starting in Col. 9 line 65 - Col. 10 line 8.);

embedding an autonomous media object (AMO) into the substitution component (Col. 7 lines 33-59 - update information. Also note embodiments starting in Col. 9 line 65 - Col. 10 line 8.), where the AMO and the multimedia file are compounded together to display at the same time (Col. 7 line 60 - Col. 8 line 2); and

transmitting the substitution component to a client readable medium (Col. 7 lines 33-59 - Updates for static data on a PSM can be retrieved from a remote source over a network, such as the internet.).

18. With respect to Claim 38, Collart teaches a method of repurposing multimedia presentation, comprising:

providing a multimedia presentation having at least one segment that can be substituted (Col. 4 lines 28-42 and Col. 7 lines 33-59 - Updates for static data on a PSM can be retrieved from a remote source over a network, such as the internet. Updates intercept and replace the requests for static information.), the at least one segment including at least one embedded request (Col. 7 lines 33-59 - dvd selection/user selection would generate an embedded request);

receiving the at least one embedded request within the multimedia presentation (Col. 7 lines 33-59 - dvd selection/user selection would generate an embedded request);

obtaining a data value associated with the at least one embedded request (Col. 7 lines 33-59 - Updates for static data on a PSM can be retrieved from a remote source over a network, such as the internet);

formatting the data value to form a substitution component that can be incorporated onto the multimedia presentation (Col. 7 lines 33-59 - Updates intercept and replace the requests for static information. Also note embodiments starting in Col. 9 line 65 - Col. 10 line 8.); and

transmitting the substitution component to the multimedia presentation to a client readable medium so that at least one segment with the multimedia presentation can be substituted using the substitution component (Col. 7 lines 33-59 - Updates for static data on a PSM can be retrieved from a remote source over a network, such as the internet.) where the substitution component and the multimedia presentation are combined to display at the same time through the client readable medium (Col. 7 line 60 - Col. 8 line 2).

19. With respect to Claim 39, Collart teaches all the limitations of Claim 38, where the multimedia file is provided through the internet (Col. 5 lines 12-25).

20. With respect to Claim 41, , Collart teaches all the limitations of Claim 38, where the at least one segment is a commercial within the multimedia presentation (Col. 3 lines 47-55 and Col. 9 lines 7-17).

21. With respect to Claim 44, Collart teaches all the limitations of Claim 38, where the multimedia presentation is stored in a portable storage medium (Col. 4 lines 43-53).

22. With respect to Claim 46, Collart teaches all the limitations of Claim 38, where the sequence of data value is a video file (Col. 9 lines 7-18).

23. With respect to Claim 47, Collart teaches all the limitations of Claim 38, where the sequence of data value is an image file (Col. 9 lines 7-18).

24. With respect to Claim 48, Collart teaches all the limitations of Claim 38, where the sequence of data value is an audio file (Col. 9 lines 7-18).

25. With respect to Claim 49, Collart teaches all the limitations of Claim 38, where the at least one segment includes a first segment and a second segment, where the first

Art Unit: 2155

segment corresponds to a first commercial and the second segment corresponds to a second commercial (Col. 3 lines 47-55 and Col. 9 lines 7-17).

26. With respect to Claim 51, Collart teaches all the limitations of Claim 38, where the step of formatting the data values outputs a HTML component (Col. 5 lines 41-50).

27. With respect to Claim 53, Collart teaches all the limitations of Claim 38, and further teaches if the at least one embedded request is wrong, then substituting the embedded request that is wrong and subsequent embedded requests with a correct embedded request (Col. 7 lines 33-59).

### ***Claim Rejections - 35 USC § 103***

28. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

29. Claims 26 and 40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Collart in view of U.S. patent 6,076,103 by Sakai (Sakai).

30. With respect to Claim 26, Collart teaches all the limitations of Claims 13. Collart does not explicitly disclose the embedded request is a uniform resource identifier. Sakai teaches a similar method for substituting data values related to information stored on a portable storage medium (See Abstract and Col. 7 lines 7-18). As part of this method, Sakai teaches a request may be a uniform resource identifier (Col. 10 line 50 - Col. 11 line 8).

Art Unit: 2155

It would have been obvious to one of ordinary skill in the art at the time the invention was made to take the method disclosed by Collart and modify it as indicated by Sakai such that the method further comprises where the statically embedded request is a uniform resource identifier. One would be motivated to have this, as it is desirable to provide a flexible presentation scheme and present the latest data for all type of information content (In Sakai: Col. 2 lines 47-57 and Col. 1 lines 5-21).

31. With respect to Claim 40, Collart teaches all the limitations of Claims 38. Collart does not explicitly disclose the embedded request is a uniform resource identifier. Sakai teaches a similar method for substituting data values related to information stored on a portable storage medium (See Abstract and Col. 7 lines 7-18). As part of this method, Sakai teaches a request may be a uniform resource identifier (Col. 10 line 50 - Col. 11 line 8).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to take the method disclosed by Collart and modify it as indicated by Sakai such that the method further comprises where the statically embedded request is a uniform resource identifier. One would be motivated to have this, as it is desirable to provide a flexible presentation scheme and present the latest data for all type of information content (In Sakai: Col. 2 lines 47-57 and Col. 1 lines 5-21).

32. Claims 28, 29, 42 and 43 are rejected under 35 U.S.C. 103(a) as being unpatentable over Collart in view of U.S. Patent 6,039,575 by L'Allier et al. (L'Allier).

Art Unit: 2155

33. With respect to Claim 28, Collart teaches all the limitations of Claim 13, and further teaches the content of the portable storage medium that can be updated includes any type of visual or audio entertainment or information data that can be stored on the storage medium (Col. 9 lines 7-16).

Collart does not explicitly disclose the information is a question. L'Allier shows that a portable storage medium can include information content such as tests, which are visually displayed to the user. (Col. 3 lines 27-43 and Col. 4 lines 28-34).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to take the method disclosed by Collart and modify it as indicated by Jenkins such that the method further comprises where the sequence of data values to override is a question. One would be motivated to have this, as Collart explicitly suggests any type visual or audible information data can be stored and updated to receive the benefits of the invention (In Collart: Col. 3 lines 41-63 and Col. 9 lines 7-16).

34. With respect to Claim 29, Collart teaches all the limitations of Claim 13, and further teaches the content of the portable storage medium that can be updated includes any type of visual or audio entertainment or information data that can be stored on the storage medium (Col. 9 lines 7-16).

Collart does not explicitly disclose the information is a question to be used in the substitution component. L'Allier shows that a portable storage medium can include information content such as tests, which are visually displayed to the user. (Col. 3 lines 27-43 and Col. 4 lines 28-34).

Art Unit: 2155

It would have been obvious to one of ordinary skill in the art at the time the invention was made to take the method disclosed by Collart and modify it as indicated by Jenkins such that the method further comprises where the sequence of data value is a question to be used in the substitution component. One would be motivated to have this, as Collart explicitly suggests any type visual or audible information data can be stored and updated to receive the benefits of the invention (In Collart: Col. 3 lines 41-63 and Col. 9 lines 7-16).

35. With respect to Claim 42, Collart teaches all the limitations of Claim 38, and further teaches the content of the portable storage medium that can be updated includes any type of visual or audio entertainment or information data that can be stored on the storage medium (Col. 9 lines 7-16).

Collart does not explicitly disclose the at least one segment is a question and the multimedia presentation is a test. L'Allier shows that a portable storage medium can include information content such as tests, which are visually displayed to the user. (Col. 3 lines 27-43 and Col. 4 lines 28-34).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to take the method disclosed by Collart and modify it as indicated by Jenkins such that the method further comprises where the at least one segment is a question and the multimedia presentation is a test. One would be motivated to have this, as Collart explicitly suggests any type visual or audible information data can be stored and updated to receive the benefits of the invention (In Collart: Col. 3 lines 41-63 and Col. 9 lines 7-16).

Art Unit: 2155

36. With respect to Claim 43, Collart teaches all the limitations of Claim 38, and further teaches the content of the portable storage medium that can be updated includes any type of visual or audio entertainment or information data that can be stored on the storage medium (Col. 9 lines 7-16).

Collart does not explicitly disclose the information is a question to be used in the substitution component. L'Allier shows that a portable storage medium can include information content such as tests, which are visually displayed to the user. (Col. 3 lines 27-43 and Col. 4 lines 28-34).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to take the method disclosed by Collart and modify it as indicated by Jenkins such that the method further comprises where the data value is a question to be used in the substitution component. One would be motivated to have this, as Collart explicitly suggests any type visual or audible information data can be stored and updated to receive the benefits of the invention (In Collart: Col. 3 lines 41-63 and Col. 9 lines 7-16).

37. Claims 30 and 45 are rejected under 35 U.S.C. 103(a) as being unpatentable over Collart in view of U.S. Patent 6,264,104 by Jenkins et al. (Jenkins).

38. With respect to Claim 30, Collart teaches all the limitations of Claim 13, and further teaches the content of the portable storage medium that can be updated includes any type of visual or audio entertainment or information data that can be stored on the storage medium (Col. 9 lines 7-16).

Collart does not explicitly disclose the information is an updated pricing on a product such that the sequence of data value is an updated pricing on a product.

Jenkins teaches that a storage medium can include information related to product data, including product pricing, that can be updated (Col. 1 lines 32-67 and Col. 9 lines 11-17).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to take the method disclosed by Collart and modify it as indicated by Jenkins such that the method further comprises where the sequence of data value is an updated pricing on a product. One would be motivated to have this, as Collart explicitly suggests any type visual or audible information data can be stored and updated to receive the benefits of the invention (In Collart: Col. 3 lines 41-63 and Col. 9 lines 7-16).

39. With respect to Claim 45, Collart teaches all the limitations of Claim 38, and further teaches the content of the portable storage medium that can be updated includes any type of visual or audio entertainment or information data that can be stored on the storage medium (Col. 9 lines 7-16).

Collart does not explicitly disclose the information is an updated pricing on a product such that the data value is an updated pricing on a product. Jenkins teaches that a storage medium can include information related to product data, including product pricing, that can be updated (Col. 1 lines 32-67 and Col. 9 lines 11-17).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to take the method disclosed by Collart and modify it as indicated

by Jenkins such that the method further comprises where the data value is an updated pricing on a product. One would be motivated to have this, as Collart explicitly suggests any type visual or audible information data can be stored and updated to receive the benefits of the invention (In Collart: Col. 3 lines 41-63 and Col. 9 lines 7-16).

40. Claims 34, 36, 50 and 52 are rejected under 35 U.S.C. 103(a) as being unpatentable over Collart in view of U.S. patent 6,976,229 by Balabanovic et al. (Balabanovic).

41. With respect to Claim 34, Collart teaches all the limitations of Claim 13. Collart teaches the formatting of new sequence of data values outputs a HTML component (Col. 5 lines 41-50), but does not explicitly disclose outputting a XML component.

Balabanovic teaches that an XML component can be used to allow for translations into other formats such as HTML and SMIL (Col. 10 lines 50-56).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to take the method disclosed by Collart and modify it as indicated by Balabonovic such that the method further comprises the formatting of new sequence of data values outputs a XML component. One would be motivated to have this, as it is desirable for information such as multimedia presentations to be accessible on different devices (IN Balabonovic: Col. 10 lines 50-56).

42. With respect to Claim 36, Collart teaches all the limitations of Claim 13. Collart teaches the formatting of new sequence of data values outputs a HTML component (Col. 5 lines 41-50), but does not explicitly disclose outputting a SMIL component.

Balabonovic teaches that the SMIL format is commonly used for presenting multimedia information as it allows for synchronizing audio with a series of images (Col. 10 lines 50-56).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to take the method disclosed by Collart and modify it as indicated by Balabonovic such that the method further comprises the formatting of new sequence of data values outputs a SMIL component. One would be motivated to use the SMIL format, as it is a particularly appropriate format for the presentation of multimedia information (IN Balabonovic: Col. 10 lines 50-56).

43. With respect to Claim 50, Collart teaches all the limitations of Claim 38. Collart teaches the step of formatting the data value outputs a HTML component (Col. 5 lines 41-50), but does not explicitly disclose outputting a XML component.

Balabonovic teaches that an XML component can be used to allow for translations into other formats such as HTML and SMIL (Col. 10 lines 50-56).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to take the method disclosed by Collart and modify it as indicated by Balabonovic such that the method further comprises the step of formatting the data value outputs a XML component. One would be motivated to have this, as it is desirable for information such as multimedia presentations to be accessible on different devices (IN Balabonovic: Col. 10 lines 50-56).

Art Unit: 2155

44. With respect to Claim 52, Collart teaches all the limitations of Claim 38. Collart teaches the step of formatting the data value outputs a HTML component (Col. 5 lines 41-50), but does not explicitly disclose outputting a SMIL component.

Balabanovic teaches that the SMIL format is commonly used for presenting multimedia information as it allows for synchronizing audio with a series of images (Col. 10 lines 50-56).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to take the method disclosed by Collart and modify it as indicated by Balabonovic such that the method further comprises the step of formatting the data value outputs a SMIL component. One would be motivated to use the SMIL format, as it is a particularly appropriate format for the presentation of multimedia information (IN Balabonovic: Col. 10 lines 50-56).

### ***Response to Arguments***

45. Applicant's arguments filed 06/27/2006 have been fully considered but they are not persuasive.

46. Applicant argues - "...*Collart is directed to replacing entire portion of the content within a series of content that make up the multimedia file; whereas, the present invention is direct to substituting an object or an AMO within the multimedia file, and displaying the AMO in parallel or compounded onto the multimedia file.*"

a. Examiner's response - Collart describes an exemplary embodiment that includes the update (ie. substitution) of components including a subpicture

stream (Col. 7 line 60 - Col. 8 line 2). A subpicture stream includes graphic overlays used for highlighting of buttons or for subtitle text. These graphic overlays are displayed in parallel with the other media components. As such, a substitution of the subpicture stream would be within the scope of the claim limitation "*embedding an autonomous media object (AMO) into the substitution component, where the AMO and the multimedia file are compounded together to display at the same time*". Applicant's arguments are not persuasive.

### ***Conclusion***

47. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David Lazaro whose telephone number is 571-272-3986. The examiner can normally be reached on 8:30-5:00 M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Saleh Najjar can be reached on 571-272-4006. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
